PSYCHOSTIMULANT EARLY INTERVENTION FLOWCHART Assessment: Confirm use and type of substance, frequency and length of use, mode of administration and time of last use.

MEDICAL COMPLICATIONS:

Dehydration or water intoxication: Monitor urine output check serum sodium

Cardiac chest pain: Use aspirin (avoid if BP > 160), oxygen and sublingual GTN. AVOID BETA BLOCKERS, they can worsen coronary vasoconstriction and AVOID CALCIUM CHANNEL BLOCKERS may trigger seizures.

Hypoglycaemia: Check BSL.

Haematuria / myoglobinuria.

Hypertension: Mostly transient, no specific treatment necessary. In extremes and possible neurovascular pathology use vasodilators: hydralazine, phentolamine or labetolol, NOT BETA BLOCKERS!

Rhabdomyolysis: Check serum potassium, CK and urine for blood. Treat with good hydration, may need dialysis.

Seizures: Use benzodiazepines first then phenobarbitone. DO NOT USE PHENYTOIN IN DRUG INDUCED SEIZURES!

Serotonin toxicity (NB: increased risk if also taking antidepressants and serotoninergic medication): Supportive treatment, IV hydration, benzodiazepines and monitoring; in severe cases active cooling, paralysis and ventilation in ICU.
