# STI/BBV TESTING TOOL FOR **ASYMPTOMATIC PEOPLE**

# STEP 1

Offering routine sexually transmissible infection/blood borne virus (STI/BBV) testing helps people feel more comfortable and willing to discuss their sexual health. A key first step is to try and build rapport with the person.

**Examples of how routine STI/BBV testing can be offered:** 

# Young people (16-29 years)

"STIs are very common, and often people don't even know they have one. We encourage all sexually active young people to get tested regularly for STIs. Would you like a sexual health check-up today?"

## Reproductive health consultations

"While you're here for contraception advice/cervical screening it's a good time to talk about other areas of sexual health, like having a sexual health check-up..."

## Travel consultations

"In some countries STI rates are very high. If you like, we could do a sexual health check-up before you go and when you return."

# **Hepatitis B vaccination**

"Have you had hepatitis B vaccinations? They protect against an infection that can be sexually transmitted. Do you want to talk about this today?"

# **General health** consultation

"While you're here, we offer all young people routine STI tests. Would you like a check-up?"

# could be caused by an STI?

Patient has symptoms that

www.sti.guidelines.org.au

## **Sexual history**

Engage the person in a culturally appropriate way about these topic areas to identify potential risks and which tests to do:

- When did you last have sex?
- Do you have sex with men, women, or both?
- When you have sex, is it vaginal, oral and/or anal sex?
- When did you last change your sexual partner?
- Do you always use condoms?
- Have you ever injected drugs?
- Do you have any symptoms? Such as... (give patient some examples)
- Have you ever been diagnosed with (or thought you had) an STI?
- When did you last have STI tests?
- Are you or could you be pregnant?

See the Australian STI Management Guidelines for how to do a detailed sexual health risk assessment.

To assess HIV, hepatitis B and C risk see www.testingportal.ashm.org.au

For online education modules on sexual health see www.thinkgp.com.au

# STEP 2 STI/BBV testing – who to test and how often Recommendations from the Australian STI Management Guidelines¹ (unless otherwise stated)

	he Australian STI Mand	agement Guidelines <sup>1</sup> (unless otherwise stated)
WHO Is the patient?	WHAT Infection?	HOW OFTEN Should you test?
Young people	CHLAMYDIA	
(16–29 years) <b>QO</b>	GONORRHOEA	Annually or more often according to sexual history or local STI/BBV prevalence. <sup>2, 3</sup> Testing for chlamydia, hepatitis B,
or asymptomatic people requesting	SYPHILIS	syphilis and HIV is recommended, as per the Standard Asymptomatic Check-up guideline. <sup>1</sup>
STI/HIV testing	HIV	
or people who are		
undergoing gynaecological		
procedures (e.g.	HEPATITIS B	Confirm hepatitis B immune status (history of confirmed vaccination or serology) and vaccinate if not immune. <sup>4</sup>
cervical screening, IUD insertion)		
Aboriginal and/or	CHLAMYDIA	Annually or more often according to council history or local CTI/DDV proviolence 2.5 Teeting for chlamydia, honetitis D
Torres Strait	GONORRHOEA	Annually or more often according to sexual history or local STI/BBV prevalence. <sup>2,5</sup> Testing for chlamydia, hepatitis B, syphilis and HIV is recommended, as per the Standard Asymptomatic Check-up guideline. <sup>1</sup>
Islander people	SYPHILIS	Repeat test for HIV and syphilis if patient exposed within previous 12 weeks (window period).
9.000	HIV*	
	TRICHOMONIASIS**	Testing for trichomoniasis and hepatitis C is recommended. Repeat test for hepatitis C if patient exposed within
	HEPATITIS C	6 month window period.
		* Especially in the presence of other STIs. ** For those from rural/regional/remote areas.
	HEPATITIS B	Confirm hepatitis B immune status (history of confirmed vaccination or serology) and vaccinate if not immune.4
Men who have sex	CHLAMYDIA	3 monthly testing offered to all men who have had any type of sex with another man in the last 3 months. <sup>6</sup>
with men (MSM) <sup>6</sup> including trans men	GONORRHOEA	MSM who are not sexually active or in monogamous relationships may be tested less frequently, but at least annually.
who have sex with	SYPHILIS HIV*	* If not known to be HIV positive.
other men		
<i>\\</i> }"	HEPATITIS A	Test if not vaccinated. Vaccinate if not immune as per recommendations in the <i>Australian Immunisation Handbook.</i> <sup>7</sup>
	HEPATITIS B	Confirm hepatitis B immune status (history of confirmed vaccination or serology) and vaccinate if not immune. <sup>4</sup> Test once a year in people living with HIV, on Pre-Exposure Prophylaxis (PrEP) or with history of
	HEPATITIS C	injecting drug use.
Sex workers (see 'MSM' for		Testing should be based on local STI/BBV prevalence, symptoms, diagnosed or suspected STI/BBV in contact and clinical findings.
male sex workers)	CHLAMYDIA GONORRHOEA	Frequency based on sexual history (private and professional life), if condom use is <100% (including history of condom breakages/slippages) or at patient request.
	SYPHILIS HIV	Repeat HIV and syphilis test if patient exposed within previous 12 weeks (window period).
		Queensland legislation requires sex workers in licensed brothels to provide a sexual health check certificate every 3
J		months.8
	HEPATITIS A	Test if not vaccinated. Vaccinate if not immune as per recommendations in the <i>Australian Immunisation Handbook</i> . <sup>7</sup>
	HEPATITIS B	Confirm hepatitis B immune status (history of confirmed vaccination or serology) and vaccinate if not immune. <sup>4</sup> If antibody positive, test for hepatitis C NAAT (PCR) to determine if patient has chronic hepatitis C or reinfection after
	HEPATITIS C	treated hepatitis C.
People who	CHLAMYDIA	
inject drugs	GONORRHOEA	Annually or more often according to sexual history.
٠,	SYPHILIS	
, get ye	HEPATITIS A	Test if not vaccinated. Vaccinate if not immune as per recommendations in the <i>Australian Immunisation Handbook</i> . <sup>7</sup>
	HEPATITIS B	Confirm hepatitis B immune status (history of confirmed vaccination or serology) and vaccinate if not immune. <sup>4</sup> According to sexual history and annually with an ongoing history of injecting drugs.
	HEPATITIS C HIV	If antibody positive, test for hepatitis C NAAT (PCR) to determine if patient has chronic hepatitis C or reinfection after treated hepatitis C.
		Repeat HIV and syphilis test if patient exposed within previous 12 weeks (window period).
Pregnant women	SYPHILIS	Syphilis, chlamydia, HIV, and hepatitis B testing are part of a routine antenatal screen. Test as per recommendations
	CHLAMYDIA	in the Clinical Practice Guidelines: Pregnancy Care.9
B		All women should have a syphilis test in the first 12 weeks of pregnancy or at the first antenatal visit. Additional testing is recommended up to five times during pregnancy for certain at-risk populations and in areas affected by a
		syphilis outbreak. Please refer to the <i>Queensland Syphilis in Pregnancy Guideline</i> <sup>10</sup> and local area guidelines for current recommendations.
	HIV	Every pregnancy. Repeat HIV and syphilis test if patient exposed within previous 12 weeks (window period).
	HEPATITIS B	All pregnant women should be screened using the hepatitis B surface antigen test. Vaccinate susceptible women who
		are at increased risk.

# STEP 2B How to test¹ – infection, specimen site and test type

"Self-collection is the preferred testing method for chlamydia, gonorrhoea and trichomoniasis."

INFECTION	SPECIMEN COLLECTION SITE	TEST		
Q FEMALES				
	Vaginal swab* (best test if not examined) OR			
CHLAMYDIA	Endocervical swab** (best test if examined)	CLL II MAAT (DCD)		
	First catch urine* (at any time of the day)	Chlamydia NAAT (PCR)		
	Rectal swab* (if patient has anal sex or ano-rectal symptoms)			
GONORRHOEA	Vaginal swab* (best test if not examined) OR			
	Endocervical swab** (best test if examined)	Gonorrhoea NAAT (PCR) + culture if discharge present		
	First catch urine* (at any time of the day)	If possible, test for culture at time of treatment to determine anti-microbial sensitivity and contribute to anti-microbial resistance surveillance.		
	Rectal swab* (if patient has anal sex or ano-rectal symptoms)	sensitivity and continuate to anti-inicional resistance surveillance.		
TRICHOMONIASIS	High vaginal swab**	Trichomoniasis NAAT (PCR)		
	First catch urine* (at any time of the day)			
MALES				
	First catch urine* (at any time of the day)			
CHLAMYDIA	Plus throat swab* (for MSM)	Chlamydia NAAT (PCR)		
	Plus rectal swab* (for MSM)			
GONORRHOEA	First catch urine* (at any time of the day)	Gonorrhoea NAAT (PCR) + culture if discharge present		
	Plus throat swab* (for MSM)	If possible, test for culture at time of treatment to determine anti-microbial		
	Plus rectal swab* (for MSM)	sensitivity and contribute to anti-microbial resistance surveillance.		
TRICHOMONIASIS	First catch urine* (at any time of the day)	Trichomoniasis NAAT (PCR)		
	*consider self-collected **health provider-collected			
Qo FEMALES AND I	MALES			
SYPHILIS	Blood	Syphilis serology		
HIV	Blood	HIV antibody/antigen		
HEPATITIS A	Blood	Total hepatitis A antibodies		
HEPATITIS B	Blood	Hepatitis B surface antigen, core antibody, surface antibody		
HEPATITIS C	Blood	Hepatitis C antibody and if positive, hepatitis C NAAT (PCR) to determine if patient has chronic hepatitis C or reinfection after treated hepatitis C.

HIV, Hepatitis B & C Testing Portal www.testingportal.ashm.org.au

# **STEP 3** Contact tracing/partner notification<sup>1,11</sup>

INFECTION	HOW FAR BACK TO TRACE	
CHLAMYDIA	6 months	
GONORRHOEA	2 months	
	Primary syphilis – 3 months plus duration of symptoms	
SYPHILIS	Secondary syphilis – 6 months plus duration of symptoms	
	Early latent syphilis – 12 months	
HIV	Start with recent sexual or injecting drug use needle-sharing partners.	
піч	Outer limit is onset of risk behaviour or last known HIV negative test result.	
HEPATITIS B	6 months prior to onset of acute symptoms. If asymptomatic, according to sexual history.	
nerallis b	For newly acquired cases contact your local Public Health Unit and/or specialist.	
	6 months prior to onset of acute symptoms. If asymptomatic, according to risk history.	
HEPATITIS C	For newly acquired cases contact your local Public Health Unit and/or specialist.	
HEPAITIIS C	Contacts via parenteral exposure (shared needles, injecting equipment) should be tested if possible.	
	Children of mothers who are hepatitis C positive should be tested.	
TRICHOMONIASIS	Unknown; important to treat all sexual partners.	

## Why do contact tracing/partner notification?

Notifying known sexual partners of people diagnosed with STIs is an essential component of reducing onward transmission and re-infection. All health professionals have a role to play in this process.

# b) Help identify which partner(s) need to be informed

Use cues such as location or events; use a non-judgmental approach; some people have more than one sexual partner who may require treatment.

c) Explain partner notification methods and offer choice
Different methods may be needed for each contact
e.g. in person, phone, SMS, email, social media,
referral to a specialist contact tracing support service.

"Think back to where you had sex recently or any special events."

"From what you've told me, there are a few informed. How would it be best to contact them?"

#### d) Support your patient to notify their partner(s)

Provide STI factsheets, suggest the Stop the Rise of STIs website for further information, offer contact tracing/partner notification websites and schedule a follow-up visit/phone call.

Assistance could be provided to your patient to access partner notification websites during the consult. These sites offer online anonymous notification of contacts via SMS or email, information and resources:

www.letthemknow.org.au for all patients

www.thedramadownunder.info for MSM

#### e) Document discussions in patient notes

#### **Provider referral**

Means the diagnosing doctor, their delegate or another health agency obtains consent of the patient and then informs the patient's sexual partner(s). This can be performed anonymously or not (depending on the wishes of the patient). This is considered the best option for notifying partners about HIV infections or if there are any concerns around domestic violence.

#### **Patient referral**

Means your patient chooses to inform their own partner(s). Discuss with the patient how their partner(s) can be informed and then provide the patient with information to give to their partner(s).
